

Packaging - Bug #1193

rsb package contains erroneous RSBDepends-relwithdebinfo.cmake

10/09/2012 06:57 PM - Anonymous

Status:	Resolved	Start date:	10/09/2012
Priority:	High	Due date:	
Assignee:	J. Wienke	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	rsb-0.7		
Description			
<p>The file RSBDepends-relwithdebinfo.cmake, which comes with the debian package rsb0.7 contains the line:</p> <pre>SET_TARGET_PROPERTIES(rsbcore PROPERTIES IMPORTED_LINK_INTERFACE_LIBRARIES_RELWITHDEBINFO "/vol/default/lib/libspread.so;/usr/lib/libprotobuf.so;rc;/usr/lib/libboost_regex-mt.so;/usr/lib/libboost_date_time-mt.so;/usr/lib/libboost_program_options-mt.so;-lpthread" IMPORTED_LOCATION_RELWITHDEBINFO "\${_IMPORT_PREFIX}/lib/librsbcore.so.0.7" IMPORTED_SONAME_RELWITHDEBINFO "librsbcore.so.0.7")</pre> <p>which results in compiling error in depending libraries (eg. cca):</p> <pre>make[2]: *** No rule to make target `/vol/default/lib/libspread.so', needed by `build/libcca.so.0.3'. Stop.</pre> <p>The path is obviously wrong (this is the CI slave spread path) and should probably not be set as library property? Don't know exactly though, how/why this causes an error.</p>

Narf, why do they use absolute paths? ;) Then we need to install the spread package on every slave and compile the package jobs against this spread version. Can you do the installation on the slaves? I will the update the package job tomorrow.

#3 - 10/10/2012 10:41 AM - J. Wienke

- Status changed from New to Resolved

- % Done changed from 0 to 100

Should be fixed in the new version on the package server.
