Define the patch version of RSB using git describe to finally have
correct releases.

All flexibility of the C++ implementation of this versioning scheme is
also available here. A build/gitversion file can be added containing a
git-describe-like string in case we want to export source archives.

This also relates to the fact that we should generate a patch version from GIT comparable to C++ so that version bumps can be correctly managed in
e.g. maven. I could do this I think.
