RSBag - Tasks #1480

Change default record ordering from create timestamp to send timestamp

04/29/2013 05:28 PM - J. Wienke

Description

To my mind the default behavior of the bag toolchain should be to reproduce the network traffic as closely as possible (i.e. the timing of the events on the network). Right now the create timestamp is the default timestamp to record and therefore sort events for replay. This timestamp is defined by the client and can hence be affected in any possible way. As a consequence, what is replayed by bag-play is usually not what was actually received by bag-record. This is especially true for systems where the create time is modified to reflect the underlying data.

Therefore I propose to change the default timestamp to "send", which is under our control in RSB and where the semantics are a bit clearer.

Along with this change we should think about how users can

- 1. Know what data is recorded in which format (e.g. by querying bag-info)
- 2. Migrate their existing data to the new indexing scheme using bag-merge (which should probably be called bag-transform;))
