History

#1 - 05/07/2013 06:15 AM - J. Moringen

I did some initial experiments for this in project:rsb (#1448). The problematic aspect is handling of upstream projects (That is the reason why the existing pkg-config test cannot be easily copied from project:rsc, #1443).

I can make my intermediate results available.

- Status changed from New to Closed

Checking pkg-config on our CI server is possible, but handling of upstream dependencies gets a real mess, which doesn't seem to maintainable.

I think the way I will do this is using vagrant to quickly set up a vm with a fresh installation and semi-automatically perform a pkg-config test before release.
