

Automated Build Generator - Tasks #2175

Make build-flow generation conditional on a variable

02/10/2015 08:28 PM - J. Wienke

Status:	Resolved	Start date:	02/10/2015
Priority:	Normal	Due date:	
Assignee:	J. Moringen	% Done:	100%
Category:	User Interface	Estimated time:	0.00 hour
Target version:	0.4		
Description			
So that we can disable build flow for modes other than toolkit.			

Associated revisions

Revision 5b843dde - 02/18/2015 01:38 AM - J. Moringen

Removed variant and distribution handling in src/**/*.lisp

fixes #2175

fixes #1915

- New variable :disable-orchestration-jobs controls whether orchestration jobs are generated.
- Removed all :variant and :distribution[s] variable access. These are no longer necessary.
- src/project/classes-spec.lisp (project-spec): added superclass `parented-mixin`
(instantiate version-spec): removed variant stuff
- src/commandline-interface/main.lisp (locate-projects): record the distribution which requested a project version
(load-projects/versioned): install responsible distribution as parent of project
(tag-project-versions): removed; no longer needed
(configure-buildflow-job): only trigger prepare/finish jobs when they exist
(configure-jobs): allow configuring names of orchestration jobs; only generate orchestration jobs when there names are defined
(configure-distribution): only generate orchestration jobs if :disable-orchestration-jobs is not defined
(main): do not call `tag-project-versions`
