

Robotics Service Bus - Enhancement #2196

Enhancement # 2195 (Resolved): Implement Spread connection pooling

Spread connection pooling for informers [Java]

03/11/2015 11:46 AM - J. Wienke

Status:	Resolved	Start date:	03/11/2015
Priority:	Normal	Due date:	
Assignee:	J. Wienke	% Done:	100%
Category:	Java	Estimated time:	0.00 hour
Target version:	rsb-0.12		
Description			

Associated revisions

Revision c1f14b19 - 03/11/2015 12:19 PM - J. Wienke

Extract spread connection options into SpreadOptions

Creates a new class SpreadOptions which contains all options used to specify the properties of a connection to the spread daemon and uses this class instead of separate arguments or Properties instances.

This prepares to use the connection properties as keys in maps for later sharing of connections.

refs #2196

Revision 19367f99 - 03/11/2015 12:19 PM - J. Wienke

Make SpreadWrapper an interface

Makes SpreadWrapper and interface and moves the existing implementation to SpreadWrapperImpl. This allows to implement facade classes, which is necessary for the connection pooling.

- SpreadFactory: Use SpreadWrapperImpl instead of interface for new instances
- SpreadInPushConnector: Pass through some exceptions specified by the Activatable interface which previously had been explicitly masked by SpreadWrapperImpl
- SpreadOutConnector: likewise
- SpreadWrapper: Converted to interface
- SpreadWrapperImpl: old SpreadWrapper implementation. Also removed some unused methods.
- Utilities: Use SpreadWrapperImpl

refs #2196

Revision 9a5e604d - 03/11/2015 12:19 PM - J. Wienke

Implement connection pooling for outgoing connections

This commit adds spread connection pooling for outgoing connection by reusing existing connections inside SpreadFactory. The effective activation and deactivation of the underlying connection is now implemented via reference counting of activate and deactivate calls so that the first user of a connection activates it and the last leaving user effectively deactivates it.

- RefCountingSpreadWrapper: new SpreadWrapper facade implementation which does the reference counting for multiple users of an underlying SpreadWrapper instance.
- SpreadFactory: Cache SpreadWrapper instances based on their SpreadOptions to reuse them for outgoing connections
- SpreadOutConnector: Decouple the activation state from the underlying SpreadWrapper instance since the reference counting might actually leave a connection open after a call to deactivate

History

#1 - 03/11/2015 02:10 PM - J. Wienke

- % Done changed from 0 to 30

Connection pooling for informers is implemented in this branch now.

#2 - 04/23/2015 11:50 AM - J. Wienke

- Subject changed from *Implement java spread connection pooling* to *Implement java spread connection pooling for informers*

#3 - 04/23/2015 11:51 AM - J. Wienke

- % Done changed from 30 to 90

#4 - 04/23/2015 11:51 AM - J. Wienke

- Status changed from *In Progress* to *Resolved*

- % Done changed from 90 to 100

#5 - 04/15/2016 11:34 AM - J. Moringen

- *Subject changed from Implement java spread connection pooling for informers to Spread connection pooling for informers [Java]*
