

Automated Build Generator - Bug #2655

Variables defined on cmdline or in distribution-context cannot be used in versions section.

09/09/2016 03:41 AM - R. Haschke

Status:	Feedback	Start date:	09/09/2016
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Processing Model	Estimated time:	0.00 hour
Target version:	1.0		
Description			
I would like to use the variable <code>\${ros}</code> to specify some versions of projects/recipes.			

History

#1 - 09/09/2016 09:36 AM - J. Moringen

- Category set to *Processing Model*
- Status changed from *New* to *Feedback*

Please provide an example or test case.

#2 - 09/09/2016 09:40 AM - J. Moringen

- Subject changed from *variables defined on cmdline or in distribution-context cannot be used in versions section.* to *Variables defined on cmdline or in distribution-context cannot be used in versions section.*

#3 - 09/09/2016 01:12 PM - R. Haschke

I used the following snippet:

```
"variables": {
  "ros":      "${next-value|indigo}"
},

"versions": [
  [ "ni-arm-server-ros",  "${ros}" ]
]
```

build-gen complains that version `${ros}` is not available in `ni-arm-server-ros`.

build-gen complains that version $\${ros}$ is not available in ni-arm-server-ros.

I see. In the current architecture, repository URLs, version names and project references in distributions are not subject to variable expansion.

Do you absolutely need this now? I'm working on grafting the new frontend and data model onto the current generator. Hopefully, that will provide some of the benefits of the new architecture in the not-too-distant future.

Do you absolutely need this now?

No, this is not urgent at all. I just was wondering, why this is not possible. Looks like an obvious feature.

#6 - 09/30/2016 10:48 AM - J. Moringen

- Target version set to 0.8

#7 - 10/25/2016 12:32 PM - J. Moringen

- Target version changed from 0.8 to 0.9

#8 - 02/23/2017 11:32 AM - J. Moringen

- Target version changed from 0.9 to 1.0
