Description

Suggestions for build.xml by John McCrae

You could perhaps slightly improve the script by adding some conditions for
Windows

e.g.,
> <condition property="pbuf.protoc" value="C:/protoc.exe">
> <and>
> <not><isset property="pbuf.protoc"/></not>
> <os family="windows"/>
> </and>
> </condition>
>

(protoc.exe is not really installed anywhere)

And add some error messages with fail
> <fail>
> <condition>
> <not><available file="${pbuf.protoc}" message="Google Protocol Buffers not found"/></not>
> </condition>
> </fail>
>

I dont see a reason to add the condition for windows if there is no default location to assume. Nevertheless, the fail messages are added. Is this sufficient to resolve this ticket?
