**Description**

Check on how to organize/distribute cmake toolchain files.

- Distribute via $prefix/share/cmake/Toolchains?
- Is there a best-practice for that?

**Associated revisions**

**Revision 931b38b2 - 10/28/2011 04:09 PM - Arne Nordmann**

Prepared project for toolchain files.

refs #683

There does not seem to be a standard/best-practice. All documentation and examples I could found put the toolchain files in arbitrary fodlers of the project itself (most of the time project root). So I suggest we go with

rsc/cmake/Toolchains locally

and install the tollchain files at

$prefix/share/cmake/Toolchains

**#2 - 12/06/2011 01:53 PM - J. Wienke**

Can we resolve this issue? I think this is fulfilled.

**#3 - 07/11/2012 09:11 AM - J. Wienke**

*- Status changed from Feedback to Resolved*

*- Target version set to rsb-0.7*

I declare this is done. We can reopen something if we find a specific problem.
